

Thanks for your interest in Harmony Email & Collaboration CheckUp.

Please note that Harmony Email & Collaboration is designed to be non-intrusive and does not require any changes to your MX records. By default, you will be onboarded into monitor/detect only. Onboarding requires a global admin to perform the setup process but can be reduced to an exchange admin after onboarding.

We will provide a high-level overview of the email and security health check steps during the discovery call. The dependencies and deliverables after each will also be highlighted.

The next few slides will go over the CheckUp process and what you can expect in the coming days and weeks, followed by a sample of the report you will receive once the CheckUp is over.

Harmony Email & Collaboration CheckUp - 14 Day Overview

The First Meeting

Objective: Establish a first call with the customer to provide a high-level overview of what is offered during the health check and the different steps

Dependencies: Signed up for the health check. Having the global admin or Exchange admin present will be beneficial. Also, (assuming) approval is needed for any change control on the customer side to proceed with the installation and start the health checks

Deliverable: Agree on the installation date and start date of the health check and cover the installation process and sample report, offer assistance with any change control approval preparation needed, and cover any questions raised from the customer side.

The Installation

Objective: Installation of the Harmony email and collaboration product with the assistance of the Global/exchange admin present

Dependencies: Having the global admin or Exchange admin present and approval for change control on the customer side. Checkpoint and partner technical resources are present and assisting with the installation.

Deliverable: Baseline report after installation, and contact details on the partner and checkpoint side for any questions during the health check and/or support needed.

Harmony Email & Collaboration Deployment - Just a Few Clicks

1

Welcome to Check Point

georgep@avanan.com

Please follow this short wizard to activate Check Point's Cloud-Security platform.
In this short wizard you will choose the SaaS you wish to secure as well as the security issues you wish to resolve.
Your selection can be modified later from our app-store.
Ready? Let's get started!

[Let's Get Started](#)

3

Installation Mode

Automatic: The initial setup and future configuration changes in the Exchange admin center will be performed by the Check Point application.

Manual: The initial setup and any future configuration changes must be done manually in the Exchange admin center. Check Point will not take any action with the application. Please contact support@checkpoint.com for assistance.

2

SaaS Selection

In this screen you need to select the cloud-service. You will be required to authorize access to Check Point using a SAML admin-level authentication to your SAAS. To chose - click on "Start" below the SAAS icon, and follow the authentication instructions.
Please note - without proper admin-level authentication Check Point will not be able to secure that service. You can choose multiple SAAS products to have Check Point secure all of them and you can change this selection later on.

- Office 365 Mail** - Top-of-the-line set of productivity tools [Start](#)
- Gmail** - Gmail is built on the idea that email can be more efficient and useful [Start](#)
- Office 365 OneDrive** - Designed for business—access, share, and collaborate on all your files from anywhere [Start](#)

During the CheckUp

Objective: 15 minute call after week one of the health check to provide feedback on the initial observations and to cover any questions or concerns from the customer side.

Dependencies: None.

Deliverable: First report, cover any observations from the first week.

Conclusion of CheckUp

Objective: Provide final feedback on the findings after the health check, deactivation of the Harmony email and collaboration agent, and rollback of the customer environment to the initial state before the health check.

Dependencies: None.

Deliverable: Detailed discussion of the actual report generated for the customer and recommendations moving forward.

Outcome: Mutually agreed outcome of the health check offered and any agreed-on next steps.
